Bryan Bowlsbey

Senior Advisor for Data Security

McLean, Virginia, United States

Summary

I am an Information Technology professional with 22 years of experience, a Top Secret clearance, CISSP, a bunch of certs, a Masters degree in IT management, and wide knowledge of networking, security and virtualization hardware and software. I have worked on every size of network, from small businesses to large government enterprises, and in nearly every role from hardware tech to Enterprise Change Board chair and head of Engineering. I have an extensive background in ITILv.3 and Microsoft Operating Framework processes, and have led and managed large groups of technical employees. Most recently I have virtualized and migrated RedSeal and Splunk instances to the cloud, set up and managed Syslog-NG servers and integrated each of those with the other cyber tools being used on a large government enterprise network. Currently geeking out over open source next gen firewalls (PfSense), Intrusion Prevention Systems (Suricata and Splunk), DNS filtering (DNSBL), RedHat, Debian and BSD Servers and Cisco networking gear.

Experience

U.S. Department of Education
